

Keywords index

Al-Si-Cu alloy	53	Methodology of research	53
Amsler machine	93	Microforming	61
Analysis and modelling	57-65	Microstructure	41
Applied mechanics	15	Modelling	65
Artificial intelligence methods	57	Modernised tribotester	93
Bed sore	33	Multi-axis milling	7
Biomaterials	33	Multicrystalline silicon	69
Casting defects	53	Neural networks	53
Casting quality	53	Nickel super-alloys	29
Cleaner production	85	Non-destructive testing	33
Cold and hot isostatic pressing	73	Oxidation	81
Computational material science	65	Plastic forming	41, 61
Contact infiltration	97	Precipitation strengthening	25
Corrosion	45	Productivity and performance management	89
Corrosion resistance	97	Properties	15, 37-49, 93
Data filtering	89	Properties of materials and products	49
Degradation	81	Radiant tubes of the boiler	45
Density	97	Reactive sintering	97
Die material	77	Real-time	89
Dies and moulds	7	Recycling	85
Effective cutting speed	7	Residual life analysis	49
Effectiveness increase	93	Rheometer	33
Electrochemical finishing	77	SCADA	89
Fatigue	15, 49	Skin	33
Flexible tooling	61	Stainless steel	97
Fracture mechanics	49	Structural phase analysis	29
Friction conditions	93	Structure	25
Friction welding	37	Surface roughness	57
Hard coal combustion gas	45	Surface texture	7
Hardness	73	Surface treatment	69, 77
Heat treatment	25, 29, 41	TBC	81
High-speed milling	57	Theoretical fundamentals of cleaner production	85
In vivo	33	Thin & thick coatings	81
Industrial management and organisation	89	Tool orientation	7
LabVIEW	89	TSK-type FLC	57
Laser treatment	69	Turning process	77
Low-cost finishing	77	Turning-form electrode	77
Machining	7	Ultrasonic-aided	77
Manufacturing and processing	7, 69-81, 97	Vibrations	61
Materials	25-33, 85	Viscoelasticity	33
Mechanical alloying	73	Waste management	85
Mechanical properties	15, 41, 65, 93	X-ray diffraction	73
Metallic alloys	15, 25, 29, 37, 65
