

## Keywords index

|                                     |               |                                   |          |
|-------------------------------------|---------------|-----------------------------------|----------|
| <b>Acid leaching</b>                | 196           | <b>Metals</b>                     | 161      |
| <b>Aluminide coatings</b>           | 204           | <b>Microstructure</b>             | 154      |
| <b>Analysis and modelling</b>       | 175           | <b>Nitriding</b>                  | 115      |
| <b>Boriding</b>                     | 115           | <b>Oxidation resistance</b>       | 204      |
| <b>Braking</b>                      | 182           | <b>Platinum modification</b>      | 204      |
| <b>Carburising</b>                  | 115           | <b>Quenching</b>                  | 175      |
| <b>Composites</b>                   | 147           | <b>Rail locomotive</b>            | 182      |
| <b>Computer simulation</b>          | 175           | <b>Research monograph</b>         | 115      |
| <b>Copper alloys</b>                | 161           | <b>SEM</b>                        | 196      |
| <b>CVD method</b>                   | 204           | <b>Slippage</b>                   | 182      |
| <b>Diatom frustules</b>             | 196           | <b>Structure</b>                  | 161      |
| <b>Foresight</b>                    | 115           | <b>Surface roughness</b>          | 169      |
| <b>Friction</b>                     | 182           | <b>Technology Roadmapping</b>     | 115      |
| <b>Frictional coupling</b>          | 182           | <b>Tempering</b>                  | 175      |
| <b>Hardness</b>                     | 175           | <b>Thermal treatment</b>          | 189, 196 |
| <b>Heat treatment</b>               | 169           | <b>Thermo analysis</b>            | 154      |
| <b>Infiltration</b>                 | 147           | <b>Thermochemical treatment</b>   | 115      |
| <b>Machining</b>                    | 169           | <b>Thermomechanical treatment</b> | 161      |
| <b>Magnesium alloys</b>             | 189           |                                   |          |
| <b>Manufacturing and processing</b> | 182-204       | <b>Wear resistance</b>            | 169      |
| <b>Materials</b>                    | 147-169       | <b>Wettability</b>                | 147      |
| <b>Mechanical properties</b>        | 161, 175, 189 | <b>Zn-Al alloy</b>                | 154      |
| <b>Metallic alloys</b>              | 154           |                                   |          |
