

Keywords index

Abrasive wear	71	Load	71
Acicular ferrite	90		
Aluminium matrix composites	82	Magnetic properties	17
Analysis and modelling	53-71	Manufacturing and processing	82-90
		Materials	7
Block sections	71	Mechanical milling	82
		Mechanical properties	7
Ceramic particles-TiB₂	53	Metallic alloys	7
Coating materials	17	Metallographic structure	90
Combined loading	35	Micro-jet cooling	90
Constructional design	62	Morphology and topography	42
Contact stresses	71		
Corrosion resistance	42	Numerical modeling	71
Costs and benefits	95		
Cracking	27	Occupational health and safety	95
Crash test	53	One-period energy	42
Cr-Mo-V steels	27		
		Pearlite morphology	71
Dispersion factor	17	Properties	17-42
Elastic properties	17	Railroad switches	71
Electrochemical copper surface layers	42	Roughness factor	17
Engineering design	62		
		Similarity theory	62
Fatigue	7, 35	Steam turbine casing	27
Finite element analysis	35	Steel matrix composites	53
		Structure degradation	27
Halloysite nanotubes	82		
Hot extrusion	82	Weld metal deposit	90
		Weldability	53
Impact toughness	90	Welding	35, 53, 90
Improvement of system	95		
Industrial management and organisation	95
