

Keywords index

2GT HTS FS	187	Drawing	195
Abrasion resistance	289	dSPACE	216
Absorption	236	Ductility Minimum Temperature (DMT)	274
Acoustic wave propagation	250	Elevated temperature ductility	274
Additive manufacturing	375	FDTD	250, 327
Adhesion	315	Fe-based alloy	222
Agglomeration	163	FEM	274
AISI 430	403	Ferritic stainless steel	403
Alloying	63	Frequency domain	250
Aluminium alloys	63	Friction stir welding	403
Amorphous alloys	150, 175, 222, 244, 289, 381	FSW	181
Amorphous ribbon	202	Grain size	169
Analysis and modelling	327-343	Hardness	222
Ansys	274	Heat treatment	87, 349
Aperiodic	229	High energy ball milling	202
Artificial intelligence methods	336	High-manganese steel	169
Atomic Force Microscope	302	High-temperature superconducting tape	187
Austenitic steel	210	HP-HT sintering	268
BET	257	Industrial management and organisation	388
Biomaterials	367	Injection casting	195, 263
Borates	163	Injection casting method	289
Bulk metallic glasses	222, 360	Injection method	281
Calcium	367	Iron alloys metallurgy	336
Casting	360	Laser	349
Casting magnesium alloys	87	Laser surface treatment	63, 87
Chemical composition	210	LHM	229, 236
Coating adhesion	294	Magnesium	367
Coatings	294	Magnesium based alloys	367
Comparative study	281	Magnetic materials	150
Composites	163, 268	Magnetic properties	175, 244
Computational material science and mechanics	336	Magnetic shape memory alloy	216
Computer materials science	87	Manufacturing and processing	349-381
Computer methods of porosity analysis	395	Massive amorphous alloy	195
Conventional method	281	Materials	63-222
Cooling rate	360	Materials science virtual laboratory	336
Copper alloys properties	274	Mean field homogenization	343
Core losses	156	Mechanical properties	210
CuNi25	274	Mechanical properties	281
Cutting edge	294	MEH-PPV	302
Cutting tools	268	Melt mass flow rate (MFR)	308
CVD and PVD	87	Melt volume flow rate (MVR)	308
Diamond	268	Melt-spinning	381
Differential Scanning Calorimetry	244		
DIGIMAT	343		
Disaccommodation	156		

Metallic glasses	175	Sensor	321
Metals	274	SF12050	187
Microhardness	289	SHS synthesis	268
Microscopic observation	222	Sintering constructional steels	395
Microstructure	150, 156, 202	Smart materials	216
Microstructure-final	268	Solid amorphous alloy	263
MIG	181	Spectrometer UV/VIS	302
Milestones	388	Spin coating	302
Modernized tribotester	321	Static tensile test	210
Mössbauer spectroscopy	244	Stripping	294
Multilayers	229, 236	Structure defects	175
Multi-scale modelling	343	Superlattice	229, 236, 327
		Surface area	257
Nanocrystals	163	Surface treatment	63
Nanoparticles	257		
Nonlinear properties	163	TEM	257
		Temperature distribution	360
Optical filters	327	Temperature measurement	360
Organic protective coatings	315	The bulk alloy	156
		Thermal analysis	87
Permeability	156	Thermo-mechanical simulation	169
Polymer	315	Thermoplastics	308
Polyurethane	315	TIG	181
Powder metallurgy	395	Titanium alloy Ti-6Al-4V	195, 263, 281
Process optimization	375	Tool materials	349
Project cost	388	Transducer	216
Project planning	388	Transmission	229, 236
Propagation	327	Tribological properties	315, 321
Properties	229-321	Tubular resistance furnace melting	367
PVD	294		
		Wear	321
Quasi-one-dimensional multilayers	250	Wear resistance	349
RHM	229, 236	X6Cr17	403
Ribbon	381	X-ray analysis	210
Roughness	289, 294	X-ray spectrometry	202
		X-ray techniques	150
Selective laser sintering/melting	375		
SEM	257	σ-phase	403
